

Valley Grinding

Shear Slitting Bottom Bands

Single—Double—Multi Cutting Edges AISI Certified Steel Quality Guarantees Dependable Performance

By using American Iron & Steel Institute certified steel, Valley Grinding Shear Slitting Bottom Bands eliminate chipping from impurities or gaps and provide consistent wear and run-time whether using a wrap or tangential slitting format.

- Match grinding capability enables tolerances to be held within .002", ensuring proper cut sizes.
- Multiple cutting edges allow easy repositioning of cut points, thereby reducing time needed to change-out bottom slitter.
- Through hardened single or double cutting edges provide consistent wear resistance and are adjustable to customer applications.
- Superfinished cutting edges reduce friction between bottom band and top slitter— resulting in improved cut quality, lower cull ratios and increased profit margins.
- Custom made OEM sizes match existing customer machine specifications and allow easy retrofitting. Quantities of desired customer sizes can be inventoried for immediate shipment.
- Tighter tolerances guarantee consistent nip point needed to assure superior cut quality and insure bands run true.
- Smooth outer diameter finish reduces scratches and marks on the web.
- Engineered to work with bladder shaft, set screw locks, or hub mounted holders.

Available in a variety of materials for all cutting requirements and budgets, Valley Grinding Solid Shear Slitting Bottom Bands can be manufactured in both US or metric specifications. For the finest product quality, industry expertise and “cutting edge” technology, you can rely on the experts at Valley Grinding.
